## Overview

Dr. V. Bramha Prasad is a highly experienced Spine Surgeon based in Hyderabad, Telangana. With over 22 years of professional experience, Dr. Prasad has established himself as a leading figure in the field of spinal health. He is well-equipped to handle a variety of spine-related issues and has a strong educational background, having completed his MCh in Neuro Surgery from NIMS. Dr. Prasad further enhanced his expertise through fellowships in Spine Surgery in France, Interventional Pain Management at Apollo Chennai, and Interventional Neuro Radiology in Switzerland.

In addition to his extensive training, Dr. Bramha Prasad is a member of the North American Spine Society and is ECFMG certified in the USA, highlighting his commitment to maintaining international standards in patient care. His proficiency is complemented by his ability to communicate with patients in multiple languages, including Telugu, Hindi, English, and Urdu, which allows him to cater to a diverse patient base. As an exclusive partner in his practice, Dr. Prasad is dedicated to providing personalized care and utilizing advanced techniques in spine surgery to ensure the best outcomes for his patients. His approach

combines expertise, compassion, and a thorough understanding of the complexities of spinal health, making him a trusted choice for patients seeking spinal treatment in Hyderabad.

## **8. Who is a neurosurgeon?**

A neurosurgeon is a medical specialist trained in the diagnosis and treatment of disorders affecting the brain, spinal cord, and nerves. This includes surgical and non-surgical approaches to neurological conditions.

## **9. Can a neurosurgeon operate on a brain tumor?**

Yes, neurosurgeons perform brain tumor removal surgery, a procedure known as craniotomy. This surgical technique is a specialized treatment for brain tumors.

## **10. Does a neurosurgeon only perform surgery?**

While neurosurgeons are highly skilled in complex brain and spine surgery, they prioritize non-surgical treatment options like medication whenever feasible. Surgical intervention is considered only when conservative management proves ineffective.
