7. Who is an Orthopedist?

An orthopedist is a physician specializing in the diagnosis and treatment of musculoskeletal disorders. They address conditions affecting bones, muscles, joints, and ligaments, including arthritis, back pain, sports injuries, and leg/foot pain. Orthopedic care encompasses a wide range of skeletal system issues.

8. What is the difference between an Orthopaedist and an Orthopaedic Surgeon?

While often used interchangeably, orthopaedists and orthopaedic surgeons differ in their scope of practice. An orthopaedist diagnoses and treats musculoskeletal system disorders, providing pre- and post-surgical care. An orthopaedic surgeon offers the same care but also performs surgical procedures for conditions such as back pain, herniated discs, bone tumors, carpal tunnel syndrome, arthritis, and other musculoskeletal injuries. Both specialties focus on musculoskeletal health.

9. Does an Orthopedist treat foot and ankle problems?

Yes, orthopedists specialize in musculoskeletal issues, including foot and ankle conditions. They treat common problems such as bunions, ankle sprains, arthritis, and sports injuries. Diagnosis utilizes imaging techniques, and treatment varies depending on the severity.
