5. What is Dr. Gopal Poduval's experience?

Dr. Gopal Poduval has 32 years of experience in neurology. His extensive career spans numerous medical facilities.

6. Who is a neurologist?

A neurologist is a medical specialist trained in diagnosing, treating, and managing nervous system disorders. They address conditions affecting both the central nervous system (brain and spinal cord) and the peripheral nervous system. Neurology expertise encompasses a wide range of neurological illnesses and injuries.

7. What is the difference between a neurologist and a neurosurgeon?

Neurologists and neurosurgeons both treat nervous system disorders. However, neurosurgeons perform surgery, while neurologists do not. Neurological conditions requiring surgical intervention, like brain tumors or carpal tunnel syndrome, necessitate referral to a neurosurgeon by a neurologist.

8. What types of illnesses are treated by neurologists?

Neurologists treat various neurological conditions, including neurodegenerative disorders like Alzheimer's and Parkinson's diseases; epilepsy; headaches; back pain; brain tumors; multiple sclerosis; injuries or infections affecting the brain or spinal cord; peripheral neuropathy; pinched nerves; strokes; and tremors. These specialists provide expert care for a wide range of brain and nervous system disorders.

9. When should I consult a neurologist?

Consult a neurologist if experiencing headaches, numbness, tingling, chronic pain, bladder or bowel dysfunction, excessive weakness, gait difficulties, jerky movements, tremors, confusion, memory problems, sleep disturbances, vision changes, or seizures. These symptoms may indicate neurological conditions requiring expert medical attention.

10. Who do neurologists collaborate with?

Neurologists frequently collaborate with neurosurgeons, particularly in surgical planning to enhance patient outcomes. Neurologists also engage in teaching and research to advance neurological science.
